1. Intract (Web3 Growth & Community Platform) [docs.intract.io], [bwaind.in]

Company Overview

Intract is a Web3 growth and community engagement platform that helps blockchain projects acquire, verify, engage, and retain users through gamified campaigns called "quests." It serves as a bridge between Web3 projects and crypto communities.

Key Features

- **Quest Campaigns:** Create tasks such as wallet connections, social follows, token holdings, NFT ownership checks, and on-chain actions.
- **No-Code Verification:** Automatically validates whether users completed blockchain or social activities.
- **User Segmentation & Analytics:** Tracks user behavior and engagement for targeted campaigns.
- **Rewards Distribution:** Automates airdrops, points, badges, and loyalty rewards.
- **Bot & Sybil Protection:** Helps identify real users and reduce fraudulent participation.
- **KOL Marketplace & Loyalty Programs:** Enables collaborations with influencers and long-term community engagement.

Typical Users

- Crypto startups
- NFT projects
- DeFi protocols
- Blockchain ecosystems
- Web3 marketing teams

Example Use Case

A blockchain startup launches a campaign where users:

1. Connect a wallet
2. Follow social channels
3. Complete on-chain transactions
4. Earn points and qualify for token rewards

Intract automatically verifies task completion and tracks campaign performance.

Payment Structure & Pricing:

- **Free Tier / Self-Serve:** Creating quests and basic campaigns on the platform was historically free without recurring subscription fees [cite: 2.2.1].
- **Gas & Reward Funding:** Project owners fund their own prize pools (tokens, NFTs, whitelists, or stablecoins) and pay the relevant blockchain network gas fees required for minting rewards or deploying smart contracts.
- **Enterprise / Growth Services:** Custom quote-based pricing for co-marketing promotions, featured platform placement, bespoke verification setups, and hands-on campaign management.

Limitations:

- **Web3/Crypto Barrier:** Requires Web3 wallet integration (e.g., MetaMask, Phantom), which alienates non-crypto users and limits its use outside decentralized ecosystems [cite: 1.1.1].
- **Airdrop Hunters & Churn:** Gamified quest platforms attract mercenary users who participate strictly for reward farming or airdrop eligibility and drop off immediately once tasks end.
- **Sybil Vulnerabilities:** Despite automated anti-bot measures, mitigating sophisticated multi-account bots remains an ongoing challenge on all on-chain quest platforms.
- **Ecosystem Shifts:** Features, domain availability, and developer tooling within quest platforms can change rapidly as Web3 marketing standards evolve [cite: 2.2.3].

2. Instamojo (Payment Gateway & E-Commerce Platform) [instamojo.com], [instamojo.com]

Company Overview

Instamojo is an Indian fintech platform that enables businesses, freelancers, educators, and creators to collect payments online and sell products or services without complex technical setup.

Key Features

Payment Collection

- Payment Links
- QR Code Payments
- Website Payment Gateway Integration
- Embedded Payment Buttons

Supported Payment Methods

- UPI
- Credit Cards
- Debit Cards
- Net Banking
- Wallets
- EMI & Pay Later Options

E-Commerce Features

- Online Store Builder
- Product Catalog Management
- Digital Product Delivery
- Order Management
- Shipping & Logistics Support

Business Tools

- Bulk Payment Requests
- GST Collection Support
- Analytics Dashboard
- APIs & Plugins
- Subscription Payments

Typical Users

- Freelancers
- Coaches and Trainers
- Online Course Creators
- D2C Brands
- MSMEs
- Consultants

Example Use Case

A fitness coach can:

- Create a payment link
- Share it through WhatsApp or Instagram
- Collect payments instantly
- Deliver workout plans digitally through their online store

Payment Structure & Pricing:

- **Transaction Fee Model:** Instamojo uses a pay-per-transaction setup, varying by store plan:

    - **Lite Plan (Free):** ₹0/year base fee + **5% + ₹3** per transaction (+ applicable GST).
    - **Starter Plan:** ~₹3,999 to ₹6,999/year + **5% + ₹3** per transaction (+ GST).
    - **Growth Plan:** ~₹14,999/year (or ₹2,999/month) + **2% + ₹3** per transaction (+ GST) [cite: 1.3.2].
- **Custom / Enterprise:** Custom pricing available for dedicated support and custom store setups [cite: 1.3.2].

Limitations:

- **Geographical Restriction:** Primarily designed for India-based merchants; international transactions involve complex compliance requirements, higher fees, and limited multi-currency payout options.
- **Uncapped Transaction Fees:** Unlike flat-rate or capped merchant gateways, the 2%–5% percentage cut applies across high-ticket sales, making it expensive for high-volume or high-average-order-value businesses [cite: 1.3.2].
- **Aggregator Dependencies:** Regulatory shifts (such as RBI payment aggregator licensing) require backend processing through licensed third-party banking partners rather than a fully independent merchant stack [cite: 1.3.2].
- **Store Customization Ceiling:** Suitable for simple storefronts, freelancers, digital downloads, and basic physical goods, but lacks the deep catalog scalability, head-to-head inventory syncing, and advanced API customizability of platforms like Shopify or WooCommerce [cite: 1.3.2].

3. Glide (No-Code App Builder) [glideapps.com], [glideapps.com]

Company Overview

Glide is a no-code platform that converts spreadsheets and databases into web applications and Progressive Web Apps (PWAs). It is designed for business teams that need custom software without hiring developers.

Data Sources Supported

- Google Sheets
- Microsoft Excel
- Airtable
- SQL Databases
- Glide Tables (built-in database)

Key Features

Visual App Builder

- Drag-and-drop interface
- Pre-built templates
- Forms, dashboards, calendars, charts, maps, and portals

Workflow Automation

- Trigger-based workflows
- Conditional logic
- Email notifications
- Data updates
- AI-powered automation tasks

AI Capabilities

- Data extraction
- Content generation
- Email drafting
- Workflow assistance
- Custom AI-powered app components

Integration Capabilities

- Slack
- Gmail
- Stripe
- Webhooks
- APIs
- Third-party business systems

Typical Applications

- CRM Systems
- Inventory Management
- Employee Portals
- Customer Portals
- Field Service Apps
- Event Management Systems
- Internal Dashboards [glideapps.com], [saini-para....github.io]

Example Use Case

A retail business maintains stock data in Excel:

1. Connect Excel to Glide.
2. Automatically generate an inventory app.
3. Employees update stock from mobile devices.
4. Managers monitor inventory through real-time dashboards. [glideapps.com], [glideapps.com]

Quick Comparison

Platform	Category	Primary Use
Intract	Web3 Growth Platform	Community building, quests, airdrops, user acquisition
Instamojo	Payment Gateway & E-Commerce	Collecting payments and selling products online
Glide	No-Code App Builder	Creating business applications without coding

In one line: Intract helps you grow Web3 communities, Instamojo helps you collect payments and run online businesses, and Glide helps you build apps from spreadsheets and databases without coding.

Payment Structure & Pricing:

- **Free Plan:** $0/month. For testing and building internal drafts; published apps are restricted or community-only with Glide Tables and 0 external updates.
- **Explorer Plan:** ~$19/month (billed annually) or $25/month. Includes 1 published app, up to 100 personal users, and 250 data updates/month.
- **Maker Plan:** ~$49/month (billed annually) or $60/month. Includes up to 3 published apps, unlimited personal users (personal domains), and 500 updates/month.
- **Business Plan:** ~$199/month (billed annually) or $249/month. Includes unlimited apps, 30 business users, and 5,000 updates/month.
- **Enterprise Plan:** Custom pricing for large organizations requiring SSO, enterprise security, and dedicated SQL/data warehouse integrations.
- **Overage Costs:** Extra data syncs and workflow runs cost **$0.02 per update**; additional business users cost 5–**6/user/month.**

Limitations:

- **Strict Usage Quotas (Updates & Rows):** Every external data sync (Google Sheets, Airtable, API action) consumes monthly updates, making high-frequency read/write applications expensive due to overage charges.

- **Data Source Gating:** Connecting external data sources requires paid tiers (Google Sheets on Maker; Airtable, Excel, and Glide API on Business; SQL/BigQuery on Enterprise) [cite: 1.4.2].
- **PWA by Default:** Apps are Progressive Web Apps running in mobile or desktop browsers. Distributing natively to the Apple App Store or Google Play Store requires third-party wrappers and separate developer accounts ($99/year Apple, $25 Google) [cite: 1.4.1].
- **Custom UI & Complex Logic Ceilings:** Front-end design is constrained to Glide's pre-built component library, without support for custom CSS, low-level JavaScript injection, or heavily custom layouts [cite: 1.4.2].
